Honda/Acura Crankshaft Damper Holding Tool

- Use: This tool is 50 mm Hex design to fit into the hex shape that is manufactured in the harmonic balancer on many Honda/Acura 4 cylinder and V6 engines. This tool holds the crankshaft (harmonic balancer) secure when removing or installing the harmonic balancer attaching bolt.

27176

Instructions:

Insert the hex end into the harmonic balancer so as to have room for a 1/2" drive breaker bar or ratchet that can be inserted into the tool at the 1/2" drive receptacle. While holding the harmonic balancer/crankshaft you now can remove the holding bolt that attaches the balancer to the crankshaft. To install the bolt do the same procedure until the desired torque is achieved.

CAUTION:
Always wear
eye protection
